QUATERNARY
DEVONIAN
ORDOVICIAN

- River gravel and mud
- D6 Shale
- D5 Medium to thickly bedded fine-grained sandstone, interbedded with shale.
- D4 Thinly bedded fine-grained sandstone, siltstone, slate, and interbedded limestone.
- D3 Massive, coarse-grained, pure, bioclastic, crinoidal limestone.
- D2 Thinly bedded fine-grained sandstone, siltstone and mudstone (with strong slaty cleavage) and with interbedded fine-grained limestone, probably towards the top.
- D1, D1a Well-bedded quartz sandstone, with interval(s) of thinly interbedded tubicolular siltstone and fossiliferous friable sandstone.
- Gordon Limestone with interbedded siltstone

- Fault - proved
- Fault - inferred
- Lithological boundary - proved
- Lithological boundary - inferred
- Lithological boundary - gradational
- Axial trace of fold - proved
- Axial trace of fold - probable
- Axial trace of fold - possible
- Bedding - proved right way up on sedimentary evidence, right way up on structural evidence, overturned on structural evidence.
- Slaty cleavage
- Minor fold axis
- Lineation (bedding x slaty cleavage)
- Late strain-slip cleavage
- Shatter zone

Geology by :- R. D. Gee, W. R. Moore & G. Pike.
