Navigation control was by reference to
photostrips and/or photo strips.
Flight path analysis was achieved by identification
of 18m. ground tracking photographs on the
navigation control. The ground tracking camera was
operated at a rate of one camera frame for
two data samples, such that successive
camera frames overlap.
An attempt was made to recover fiducials
at intervals of 1.0 kilometre,
and only recovered fiducials are shown
on the map.
During processing the photostrip was controlled using
the Australian Metric Grid control points.

@ Registration point identified on photostrip.
+ 2000 metre Australian Metric Grid.
