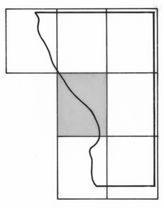
SURVEY LOCATION



SHEET INDEX

Navigation control was by reference to photomosaics and/or photo strips.
Flight path analysis was achieved by identification of 16mm. ground tracking photographs on the navigation control. The ground tracking camera was operated at a rate of one camera frame for two data samples, such that successive camera frames overlap.
An attempt was made to recover fiducials at intervals of 1.0 kilometre, and only recovered fiducials are shown on the map.
During processing the photomosaic was controlled using the Australian Metric Grid control points.

SURVEY BOUNDARY
⊕ Registration point identified on photomosaic.
+ 5000 metre Australian Metric Grid.
