

**GEOLOGY OF THE MONTAGU – WEST POINT AREA**  
 FIGURE 1 Report 1989/34 AUTHOR: D. SEYMOUR  
 TASMANIA DEPARTMENT OF MINES, DRAFTSPERSON: ASM 19/09/89 **5311**

**STRATIGRAPHIC COLUMN**

<b>QUARTERNARY</b>	
	Superficial deposits
<b>TERTIARY</b>	
	Basalt
	Limestone
<b>CAMBRIAN</b>	
	Laminated siltstone, greywacke, conglomerate (fossiliferous)
	Dolomite
	Basalt, laminated siltstone, greywacke, conglomerate
	Chert (black & white)
	Conglomerate (mostly siliceous)
<b>PRECAMBRIAN</b>	
	Mostly quartzite
	Mostly siltstone

GEOLOGIST : D. B. Seymour

- Sealed road
- Gravel road
- Vehicular track
- Dip & strike of bedding in rocks:
  - Stratigraphic facing known
  - Stratigraphic facing unknown
  - Overturned beds
- Minor folds in bedding: Direction & plunge of hingeline shown
- Faults: (Inferred)
