

S. C. T. M.

5 cm

H. W. Vein 2850 N to 3050 N.
8, 8A & 9 levels.

North end 8A level, vein has become very poor and narrow. The vein splits at about 2910 N, the F.W. split breaking up and diminishing at 2940 N. The H.W. spit starts steeply but it is suggested that ~~it~~ will flatten off and grow wider to the north and tie up with the H.W. spit at the north end of 9 level.

The F.W. split could 'make' again and tie up with the F.W. split on 9 level and a hitherto unknown spit in the F.W. of the Hanging Wall vein on 8 level.
