0324 - 1180

INTERPRETATIVE GEOLOGICAL LEVEL PLAN - 55 M.R.L.

KG2 - 94

REFERENCE

- Upper Meta — Volcanics
- Hangingwall Biotite Hornfels
- B Lens Marble
- B Lens Ore (cut-off 0·25% WO_3)
- Biotite Hornfels
- P.C.H. (Pyroxene Garnet Hornfels)
- C Lens Ore (cut off 0·25% WO_3)
- Banded Footwall Beds
- Older Volcanics
- Quartzite
- 30° Strike & Dip
- Fault, showing relative movement
- Mineralisation <0·25% WO_3
- Degree of uncertainty in Fault position
- Intercept reliable (good degree of correlation between DDHs on section)
- Intercept less reliable (poor correlation between DDHs on section)

Interpretative Geology:

— Using the 'N' section lines. The N sections lines are the original drilling sections drawn assuming the unsurveyed DDHs have not deviated from the collared bearing of 323°.

— Assuming faulting to account for apparent changes in strike and dip.

INTERPRETATION

Interpretative Geology:

— Using the 'L' section lines. The L section lines are constructed drilling sections assuming the DDHs have deviated 20° to the west from the collared bearing. Most of the surveyed DDHs deviate by varying degrees to the west.

— Assuming flexuring of strata to account for apparent changes in strike and dip. This interpretation assumes an anticlinal structure.

Note: N section unsurveyed DDHs assume constant inclination

L section unsurveyed DDHs assume a flattening of 1 degree per 50m.
