

Appendix 5: Drill Logs

DIAMOND DRILLCORE LOG			project: Windermere area	hole no. WD41 (B41)
			location: Gaunts Hill	page 1 of 2
			logged by: Rachelle Macdonald	date: 29.1.98
				scale: 1:1m
metre	structure	grainsize	description	
			Basalt rubble.	
4m				
			Solid basalt - coarse grained, feldspar rich - fresh rock.	
7m				
9m			core loss - probably sand rich layers	
	9.07m		Orange clay - organic material present - not well consolidated => little masses	
			Brown clay, more consolidated very fine grained	
			sand rich layer, dark in colour illustrates a change in sedimentation	
15m				
			medium brown/yellow clay, surface weathered to blue/grey colour, well held together.	
			slightly more coarse grained, rich in organic matter i.e. roots etc "sandy clay"	
20			Very dark brown clay (still wet)	
22
