

## MELBA PROJECT LOCATION PLAN

- ◆ prospective for shallow extensions of previously mined Ni-Cu deposits and deeper larger deposits in altered gabbros and ultramafics.
- ◆ shallow resources already identified at Nickel Reward and North Cuni-Genets.
- ◆ planning and permitting of modest sized open cuts and underground mines on these resources in progress.
- ◆ recent intersection of massive sulfides (0.7m 10.8% Ni, 3.8% Cu) at 200 vertical metres below Nickel Reward confirms depth extension of mineralisation.
- ◆ deeper drilling scheduled to commence in January 2008.
- ◆ discovery of new zone of mineralisation at Devereaux, 800m west of Nickel Reward.
