NOTES

This image shows airborne electromagnetic (EM) data sourced from the 2002 Mount Reads Volcanics survey. The survey was flown with the DIGHEM helicopter-borne EM system.

The DIGHEM system measures resistivity using several different transmitter frequencies. The measured resistivities have been converted to an apparent conductivity.

This image is composed of three layers:
Red layer - f=34000Hz
Green layer - f=6000Hz
Blue layer - f=680Hz
