

**LEGEND**

- Existing diamond drillholes (Mineral Resources Tasmania)
- SinoSteel Tenement

**NOTES**

This image shows airborne electromagnetic (EM) data sourced from the 2002 Mount Reads Volcanics survey. The survey was flown with the DIGHEM helicopter-borne EM system.

The DIGHEM system measures the apparent resistivity using several different transmitter frequencies.

This image is composed of three layers:  
Red layer - f=34000Hz  
Green layer - f=6000Hz  
Blue layer - f=660Hz
