

**Elliott Bay, SW Tasmania, Australia.**

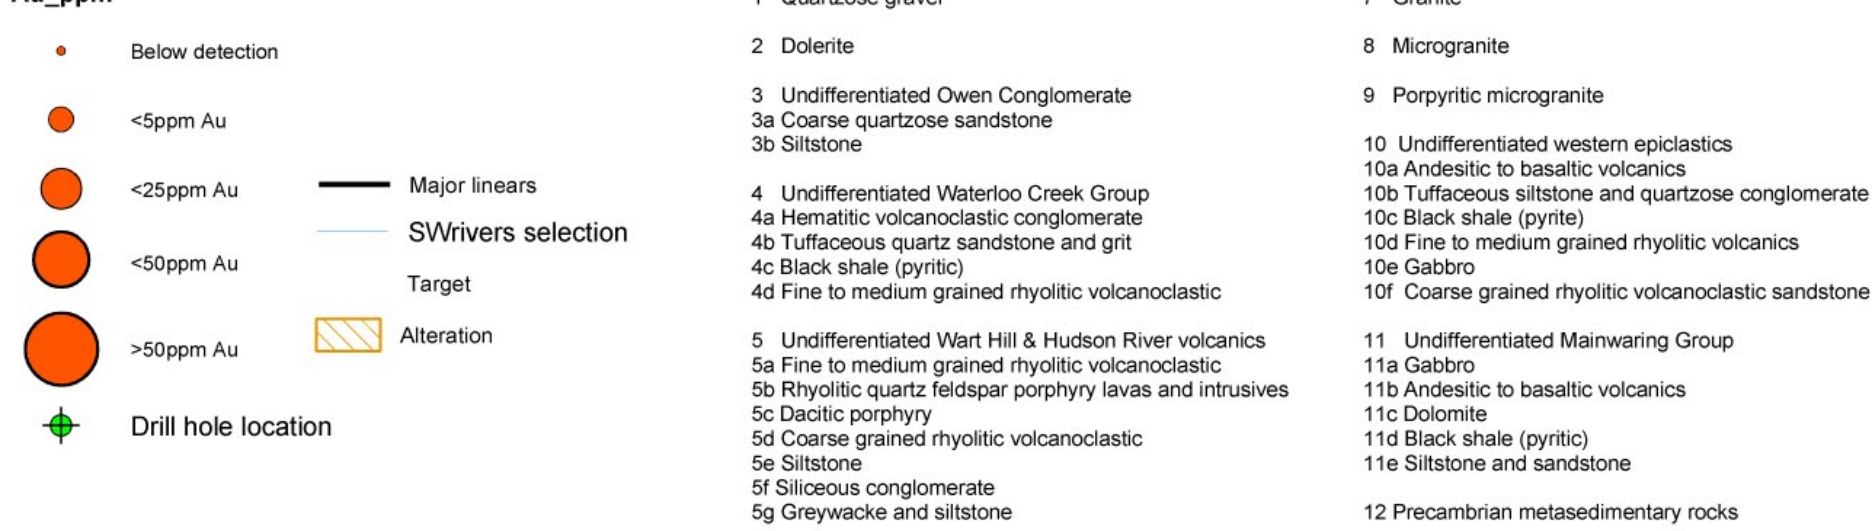

**Targeting Map.** Satellite image with major linear structures, radiometric and panned stream sediment anomalies.

View extents as for main map. Major linears (shown red) determined from all image products. Light brown areas are those areas of high radiometric response, not apparently readily explained as a result of a watercourse cut in the area. The coincidence of these stippled areas with areas of known mineralisation is consistent with the radiometric highs being the result of alteration. Numbered target areas are the same as shown on the main map (here shown red). Underlying geology from TCR88\_2853 (Cyrus Gold).

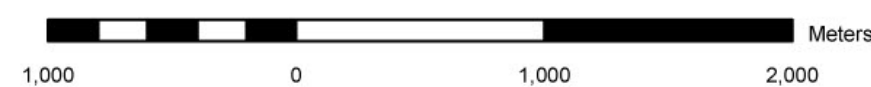

### Legend

**Au ppm** (actual values shown)

**Main map**

Tarads (numbered on inset). Anomalous: 1- Radiometrics, stream sediment; 2- Radiometrics, magnetic highs, linear structures, stream sediments; 3- radiometrics, stream sediment, magnetic; 4- Bulls-eye magnetic, radiometrics, stream sediments; 5- Bulls-eye magnetic, radiometrics, stream sediments; 6- Bulls-eye magnetic, radiometrics, stream sediment; 7- Major linear structures, intersection of linear structures, radiometrics, stream sediments; 8- radiometrics, linear structure, intersection of linear structures, stream sediments; 9- mapped fault terminating major linear structure, anomalous magnetic indicating synclinal fold, stream sediments; 10- radiometrics, stream sediments; 11 - as for 9; 12 - radiometrics, major linear structures, possibly folded mineralised horizon; 13 - radiometrics over major magnetic anomaly, untitled stream sediments; 14 - radiomics, major linear structure, stream sediment; 15 - as for 14; 16 - bulls-eye magnetic, stream sediment; 17 - as for 16; stream sediments; 18 - radiometrics, linear structures, stream sediments. The numbers are also noted in the stream draining regions containing major linears, and these should also be considered as valid targets.

Non-standard map scale (optimised to sheet)  
Geographic Datum AGD66, Zone 55.

Resources Tasmania.

**Statement of uncertainty.**

Attribute data for point data have not been verified. Position error as per stated in Mirloch database (available from Mineral Resources Tasmania). This database indicates position errors for some deposits of greater than 1km. Doris drill hole database is known from comparison with mineral exploration reports not to be complete. Position error for gridded image data is unknown but likely to be less than the original flightline spacing of 250m. Road and river data have been digitised from georeferenced company reports. Comparisons between georeferenced images indicate position errors of up to about 100m (but typically less than 30m). Errors for other scanned and georeferenced products are in the order of less than 50m.
