

### Company details

- Indicoal Mining Australia Pty Ltd (Indicoal) is an Australian company registered with the Australian Securities and Investments Commission (ASIC) since July 2010. Indicoal is 100% owned by Advaita Group, which is a Singapore group of companies.

### Project location

- The Langloh Coal Project (the project) is located approximately 4 km west of the township of Hamilton and approximately 60 km northwest of Hobart.
- The project area is next to the existing operating Kimbolton Mine.
- The project area is gently undulating land that has previously been cleared for grazing and is currently used for agricultural purposes.

### Summary of the proposed project

- Conventional open cut mine of the thermal coal resource of up to 8.1 million tonnes<sup>1</sup>.
- Average annual run of mine (ROM) coal production is estimated to be 910,000 tonnes.
- Estimated mine life of up to eight years.
- Coal will be crushed to client requirements at the site prior to transport to clients. No other processing of the coal is proposed; as such the project will not require construction of a tailings storage facility.
- Initially mine waste rock will be placed in waste rock stockpiles outside the pit. Once there is sufficient space in the pit, waste rock will be used to backfill the pit no longer required for mining.
- Water requirements and potential water supply will be investigated as part of detailed mine design and environmental studies.

### Product transport

- Two options for export are currently being investigated – first to export from Bell Bay Port, the second is a mid-sea transshipment option.
- Transport from the mine to the export facility will be by road or a combination of road and rail.

### Workforce requirements

- Current workforce requirements are based on one 12-hour shift per day for six days per week.
- Estimated workforce is 39 employees – eight maintenance, 20 operations and 11 administration/support staff.

### Proposed environmental studies

- Detailed environmental and social studies will be undertaken including: visual amenity, mine closure and rehabilitation, flora and fauna, groundwater and surface water, traffic and transport, air quality and greenhouse gas
