

File Note – email reply on 15-11-2016 from East Coast Surveying, St Helens, regarding a method to convert Anchor Mine Grid co-ordinates to AMG or GDA

Hi Steve,

Thanks for your enquiry. Unfortunately we do not have a coordinate transformation on file to easily convert from local site datum to AMG/GDA. Andrew MacGregor has done survey work at the mine in the 1990's but has since sold East Coast Surveying. We would have some old paper files and also some digital data on an old survey software system called SDRMap. We could look through the old data and see what we come up with. We would have to charge hourly rates (\$120 p/h + GST) for our time. It may also require us to do some GPS observations on old control points to calculate conversion parameters. We are happy to do this, but as mentioned above we would have to charge for our time.

Please feel free to contact me if I can be of further help.

Regards,

Andrew
