Eastern End, South Face : Gerson's Workings Scale 1:100

Soft altered / weathered medium grained granite

white alteration 'dyke'

Soft weathered / altered medium grained granite with minor qtz / tourmaline veins

Medium grained granite totally kaolinised

In End Face and North wall, white alteration 'dyke' divided into more numerous, narrower, more tourmaline rich 'bands'

W.F. 7 Medium grained tourmaline / quartz alteration 'dyke' 3-4 m. wide. Brown, soft, altered granite en dempt - contains white mica / grains developed along contacts ?

W.F. 8 Medium grained, fresh, unaltered granite

Gradational

Medium grained granite fresh, unaltered

W.F. 9 Medium grained white alteration 'dyke' approx. 2m. wide. Minor tourmaline

Medium grained granite. Fresh, unaltered

Ioint dominant

W.F. 5

070° dominant

Fresh unaltered medium grained granite

W.F. 22 Shafts collared on outcrop of massive black tourmaline within white dyke. Sunk on brown, argillised granite with vertical tourmaline stems

W.F. 22 Flat lying 'white dyke' little or no tourmaline. Overlying argillised medium grained granite

Gradational

W.F. 1 Flat lying (approx 10° d/p to E) quartz / minor tourmaline ('white dyke') alteration, with vertical sheeted fracturing along joints, granite between argillaceously altered

W.F. 3 Heavily tourmalinised / minor quartz 'veins' - possibly brecciated 'vein' orientation and thickness obscure. Appears to be roughly parallel to 'E-Vein'

Medium grained granite soft - argillic alteration. Contact but a narrow micaceous gritten developed

W.F. 4 Massive black - red tourmaline / hematite (similar to W.F. 2) Microcrystalline - medium grained. Appears to be due to partial replacement of granite

W.F. 3 On dump, medium grained granite - 8 cm. wide tourmaline veinlet. High specific gravity tourmaline fragments

'White dyke'

Massive 'white dyke' alteration

Massive white dyke' alteration

W.F. 10 Pale, fresh coarse grained - medium grained granite

W.F. 11 Dump - medium grained - coarse grained tourmaline and quartz veined granite. Minor pyrite and chalcopyrite. Mostly unaltered granite

Fine grained white dyke

Vertical 'white dyke' in shaft. Altered / weathered granite

W.F. 24 Dump - massive black tourmaline and grey / white silicified granite

W.F. 25

Quartz / tourmaline alteration 'dyke'

W.F. 12 Dump of coarse grained - medium grained tuscous altered granite, tourmaline, quartz tourmaline alteration, and quartz veins

Surface

Haulage

3/3 Massive black tourmaline and white quartz 8 m. wide

W.F. 17 Dump of unaltered granite and quartz / tourmaline / ( ) alteration

W.F. 20 Dump consists of large blocks of medium grained - coarse grained granite with pink coloration - similar to c.g.r.

W.F. 13 Quartz / tourmaline alteration 'dyke' approx. 1.5 m. wide and vertical coarse grained - medium grained like surrounding granite. Cross joints well preserved.

Medium grained - coarse grained granite unaltered

W.F. 16 Flat lying? white alteration 'dyke' up to 10 m. wide. Tourmaline along joint surfaces and in veins. Texture varies from medium grained - coarse grained (after granite) to massive coarse crystalline vein material.

Medium grained - coarse grained unaltered granite

ALTERATION

- Argillic Alteration
- Quartz and Topaz and / or Tourmaline
- Total tourmalinization, accessionally with hematite
- Hydrothermal — Breccias
- Collapse — Breccias
- White alteration 'dykes' (Erisem Veins)
- Quartz - mica greisen
- Area of Tourmaline nodules

ROCK TYPES

- Fine grained
- Medium grained — 'White' younger granite
- Medium grained, usually porphyritic
- Coarse grained — 'Red' older granite

- Major Lineament
- Joint with dip
- Joint, vertical
- Foliation

- Definite
- Approximate
- Inferred — Geological Boundaries
- Old mine or prospect

Hwlong Winder House ??

Medium grained (red ?) granite

AM 488

Track

Soft strongly argillized medium grained granite

Open fracture

Highly argillized medium grained granite with numerous quartz veins

Highly siliceous alteration with disseminated arsenopyrite. Close jointing

AM 486E

AM 487

AM 485

Winch House ??

WATER

sulphides?

White soft, strongly argillized granite with numerous dykes, apophyses and veins of strongly tourmalinized rock + 'Kidney Basement' in base of sand suggests presence of sulphides.

C.F. 10 Breccia type - subangular to subrounded totally tourmalinized fragments usually 10cms across (open framework) in a matrix of tourmaline & tourmalinized host rock Elsur. A Hydrothermal Breccia.

C.F. 13

C.F. 12

C.F. 11

BLACK FACE WORKINGS

AM 486

Wall developed boudinage in dark grey / black strongly tourmalinized dyke

Trench

Adit developed on large mass of dense fine grained black tourmaline

AM 480

AM 483

Granite strongly argillized with numerous minor quartz / tourmaline veins, dykes, pods etc.

Quartz / tourmaline alteration dyke?

Outcrops of fine grained - medium grained granite

C.F. 8

Grey siliceous dyke with accessional masses of dense fine grained black tourmaline

MUNROE'S SHAFT

Cross joints later than joints & bedding parallel to strike of dyke - cut patches of sulphide within siliceous dyke.

Soft, argillic alteration along conduct small incipient tourmaline nodules

C.F. 9

Intersection of tourmaline rock dyke

C.F. 5 Open framework breccia containing 2 types of fragments - subrounded medium grained grey fragments (similar to C.F. 4) up to 25 cms, average 10 cms and smaller fragments of a dense fine grained grey rock up to 15 cms across, average 7cms in a matrix of recrystal & tourmaline

Grey / white silicified granite

Trench

C.F. 7 Altered (silicified) rocks on dump contain fine grained sulphides? (pyrite)

Fine grained pale granite with tourmaline nodules up to 10 cms in diameter

C.F. 3 Strongly banded quartz & tapaz alternating with tourmalinized bands (fragments of host rock) + Quartz - Nicrostruc veins cut through all and areas of brecciation (relatively minor) - subangular fragments up to 10 cms across of dark tourmalinised rock surrounded by quartz crystals - Collapse ?

C.F. 2 Outcrops (near footwall) of medium grained (white) granite with tourmaline nodules up to 7 cms in diameter

Subcutcrop of grey unbrecciated medium grained quartz / tourmaline rock similar to fragments in C.F. 4

C.F. 4 Collapse breccia - subangular fragments up to 15 cms across of medium grained grey quartz / tourmaline rock mantled with a thin layer of dense fine grained black tourmaline, then coarse quartz crystals often exhibiting comb structure - in places euhedral crystals obviously grown into voids

Alteration decreases and rock becomes less siliceous now returns to a medium grained granite

Grey alteration 'dyke'. Evenly distributed quartz and tourmaline

C.F. 1

'White dyke' - Medium grained saccharoidal texture, no visible tourmaline

'White Dyke' Smooth (massive quartz (& topaz ?) alteration.

AGNEW CREEK

float cg. unaltered biotite granite

cg. unaltered biotite granite

float of aplite

green and brown altered (sericilized?) granite

float of quartz/magnetite rock ± tourmaline and porphyritic fine grained granite

altered argillized c.g. granite occasional quartz tourmaline veins and nodules. thin sulphide (pyrite?) veining

float generally c.g. granite but some quartz tourmaline rock

float of quartz tourmaline and c.g. granite containing tourmaline nodules in small creek.

LEGEND

ALTERATION

- Quartz and topaz and/or tourmaline
- Total tourmalinization, occasionally with hematite
- Hydrothermal
- Collapse
- Breccias
- White Alteration "Dykes"
- Argillic alteration
- "Green" alteration (sericitized granite) generally with hematite or pyrite
- Quartz - mica greisen
- Area of tourmaline nodules

ROCK TYPES

- Aplite or microgranite
- Fine grained
- Medium grained
- White granite
- Porphyritic granite
- Medium grained
- Coarse grained
- Red granite

- Major lineament
- F — F Fault
- Definite
- Approximate
- Inferred
- Geological boundaries
