

Digital data excludes the Hellyer (CML103M/87) and Que River (CML68M/84) mining leases but does extend out to the original boundary of EL106/87.

Data is structured in simple directories. File names should be self evident but some directories do contain a README file to assist in identifying data.

Most data has been saved as both EXCEL (v7.0) spreadsheets (.xls) and MAPINFO (v4.1) tables (.dat, .id, .map, .tab) formats.

The COREL files are v6.0.

For point data both AMG and local grid coords have been provided. Most work on the EL was done in local grid and converted to AMG for use in MAPINFO.
